Temple Receipts & Billing Application

Delivered by: Satvik R Shetty
Delivered to: Shree Guru Raghavendra Swamy Vrindavanam

1. Features Delivered

#	Feature	Description
1	**Sell (POS) billing**	Searchable seva catalog with a quantity stepper per seva, plus custom-amount items (name, phone, amount) for one-off entries. "Save & Print" saves and prints in one action. Every bill gets a GBN (Grand Bill Number, sequential across all time) and a DBN (Date Bill Number, resets each business day).
2	**Kanike (donation) module**	Dedicated donation entry form — donation type, optional bhakta address, optional remark, an "Online Pay" flag, and a "no money" (in-kind) option. Entries can be edited after the fact, including correcting the recorded date, and reprinted.
3	**Kanike A5 voucher**	Custom printable voucher matching the temple's own paper template, including the amount written out in words and a period label.
4	**Kanike thermal report**	A seva/donation-type-wise donation summary for a chosen period, formatted for and printed directly to the thermal printer.
5	**Dual-path printing**	Direct USB thermal printer support (WebUSB, ESC/POS-style rasterized printing so Kannada renders correctly) with automatic fallback to the browser's print dialog when no printer is connected; reprints are stamped "COPY".
6	**UPI QR on receipts**	QR code auto-generated per bill, pre-filled with the exact amount via a UPI ID set once in Settings; not shown at all if no UPI ID is configured.
7	**Sales History**	Day-by-day browsing with previous/next-day navigation and running totals; any past bill can be reprinted; admins can permanently delete a bill, which automatically closes the resulting gap in both the GBN and DBN sequences.
8	**Analytics dashboard**	Revenue over daily / weekly / monthly / yearly ranges, plus a breakdown by seva — visible to admins only.
9	**Reports (Sell)**	"Bill" report (every line item) and "Summary" report (seva-wise totals per day), each downloadable as PDF or Excel, for a chosen month, custom date range, or full history.
10	**Reports (Kanike)**	Equivalent itemized donation report, downloadable as PDF or Excel, for a chosen month, custom date range, or full history.
11	**Kannada-correct PDF rendering**	PDF reports are rendered through headless Chrome with an embedded Kannada font, so conjuncts and vowel signs shape correctly (not just glyph-substituted).
12	**Sevas management**	Add/edit sevas and kanike types, drag-and-drop reorder, activate/deactivate, fixed or free-entry pricing.
13	**Settings**	Temple name/place/phone (used on every print), UPI ID, a Grand Bill Number override (to continue an existing paper numbering scheme), and printer connection.
14	**Multi-user accounts & roles**	Admin vs. staff roles, admin-only user management, bcrypt-hashed passwords, forgot-password flow via a one-time emailed code (10-minute expiry, console-logged if no SMTP is configured), first-time setup when no users exist yet.

#	Feature	Description
15	**Access control & basic hardening**	Admin-only routes for settings, user management, seva editing, reports, analytics, and receipt deletion; signed session cookies; rate-limiting on login/password-reset endpoints.
16	**Bilingual Kannada + English**	Kannada font rendering and consistent bold typography across the UI and every print/report output.
17	**Installable, responsive app**	Works as an installable PWA (custom icons, manifest) on phone, tablet, or laptop.

2. What's Needed to Run This Smoothly

Requirement	Purpose	Notes
Web hosting (Node.js / Next.js compatible, e.g. Vercel)	Runs the application server	Currently on the developer's personal account
MongoDB database (e.g. MongoDB Atlas, or self-hosted via the included docker-compose.yml)	Stores receipts, sevas, users, settings	Currently on the developer's personal account
SMTP email account (Gmail, Outlook, Zoho, or similar)	Sends the forgot-password one-time code	Without it, the code is only logged to the server console — not usable in production

3. Final Price

Total **₹30,000**

Covers the full feature set above — Sell/POS, Kanike donations, dual printing paths, UPI QR, Kannada-correct reporting, analytics, multi-user admin, and access control — inclusive of the development, testing, and printer-integration work already completed.

4. Post-Payment Handover

Once payment is received in full, the following will be migrated from the developer's personal accounts to accounts owned by the temple/client:

- **Hosting account** (currently on the developer's personal hosting account)
- **Database** (currently on the developer's personal MongoDB account)
- **Any other service credentials** (e.g. SMTP email sender) currently tied to the developer's personal accounts

This ensures the temple has full ownership and control of its own data and infrastructure going forward.
